WHERE LAND ENDS & Sea Begins

From the end of the Homer Spit, the world opens to Kachemak Bay, Cook Inlet, the Gulf of Alaska, and the Pacific Ocean. For millennia, the Spit has been a gathering place for fishing and hunting expeditions. Today, fishermen set out, and residents hop in skiffs to explore the southern shore. Here, at the end of the road, our connections to other places stretch well beyond the horizon.

The Alaska Marine Highway isn't like you can't hop in to Seward, Kodiak, Unalaska and Ketchikan.
Kachemak Bay State Park is a small water park that runs the Bay with over 15 miles of trails and access to fishing gardens and viewing points. Kachemak Bay's designation as a State Critical Habitat Area means continuing contributions for marine vegetation, commercial, and subsistence activities.

FACING CHANGE HEAD-ON

Alaskans witness the impacts of a rapidly changing climate both on land and at sea. Receding glaciers, eroding shores, warmer waters, changing fisheries, and a more acidic ocean tell a complex story. Renewable energy sources—from hydro, wind and wave power to active volcanoes with geothermal energy potential—offer a means to build our economy and support local communities for generations of Alaskans and visitors to come!

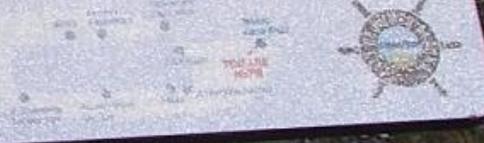

Jump in a kayak—it's a great way to explore.
Photo: Lisa Holzapfel

Explore numerous bays and coves—they have sustained and sheltered Native communities for countless generations.
Photo: Pratt Museum

Transe paths have been developed by the Pratt Museum in partnership with the City of Homer, Alaska Department of Planning, Parks, Dept. of Aquatic Control, Cook Inlet Regional Fisheries, the Alaska Department of Fish and Game, U.S. Fish and Wildlife Service, and independent scholars.
